Low Profile, Commercial / Industrial Evaporative Cooling
7,500 to 8,500 CFM Industry Standard Rating

Features

- “Low profile” (only 32.25” high)
- External static pressure range of 0.0” to 1.2” W.G.
- Factory tested and shipped ready to operate, including factory wired components
- ETL listed and labeled in accordance with U.L. standards
- Copper-wound, heavy duty ball bearing motors
- One high capacity pump provides complete media saturation
- Self-aligning, heavy duty, greaseable, pillow block, ball type fan bearings
- Premium 8” or 12” thick cross fluted media for 80% to 90% evaporative efficiency
- Lifting sky hooks
- Heavy gauge, hot dipped galvanized steel construction
- Epoxy powder base paint finish baked on at 375°
- Rugged cabinet assembly with double thick steel corners
- “Rain-Tight” pitched top construction (1/4”/12”)
- Easily accessible external distributor clean-outs
- Side access media removal
- Adjustable motor sheave for air flow adjustment
- Epoxy painted G-90 galvanized steel reservoir

Available Options

- U.L. 900 media
- Prewired control packages
- Distribution flush system
- Freeze protection
- Hinged access door
- 2” Pre-filters
- Installation accessories
- Fused and non-fused disconnects

**Notes:**
1. UMP-800 series, blower type evaporative coolers are designed for ducted applications with external static pressure ranges of 0.0" through 1.2". For straight down ducted low static applications with external static pressure ranges of 0.0" to 0.2" a UMP-700 series propeller type axial fan model may be recommended.
2. Only motors 1 HP or less are provided with integral thermal protection. Motors 1.5 HP or greater require a separate motor overload device. Amperage ratings shown are NEC at nominal HP. Usable at 208v. Consult factory for overload and control options.
3. Weights are in pounds and include motors, pumps and drives. Operating weights include saturated media and assumes 2.5" depth of water in sump. Weights exclude optional accessories such as curb, diffuser and controls.
4. 230v pumps are available; contact UMP for details.

* Performance rating is at max BHP and includes the effects of the evaporative media, inlet louver, motor and drives in the airstream.
* Fan performance shown is based on tests made in accordance with AMCA 210-85, installation Type B; free inlet, ducted outlet.
* Power rating (BHP) does not include drive losses.
Auxiliary Drain - (3/4” male hose thread) - Consult factory for special applications.

A. Distributor Flush System - May be externally plumbed (by others). The installer has the option to run the flush line internally to the overflow tube or secure the flush line back into the sump. If the installer chooses to run the flush line internally to the auxiliary drain then it will be necessary to externally plumb the auxiliary drain.

B. Freeze Kit - Must be externally plumbed (by others) when utilizing optional Freeze Kit. Note: When the optional Freeze Kit is used in conjunction with the optional Flush Kit, the flush line will be factory mounted back into the sump only.

Electrical Service - 7/8” entrance for 1/2” conduit.

Note: When the unit is supplied with an Integral Single Point Power Connection/Control Panel the electrical service entrance will be on the opposite side of the unit than shown here. Also, the supply water penetration will be on the opposite side than shown here (opposite the electrical panel).

Float - 3/8” Compression fitting connection made inside unit. Minimum 15 p.s.i. water pressure is recommended to deliver the volume needed to meet the high summer evaporation and bleed requirements. Do not exceed 125 p.s.i.

Primary Drain / Overflow - (3/4” male hose thread) must be externally plumbed (by others).

Optional - F1, G1 Electrical Service
